Active Weather Warnings, Watches and Advisories by County:

http://www.wrh.noaa.gov/sto/brief/wwa_bc_cal.php

WEATHER SYNOPSIS BY REGION

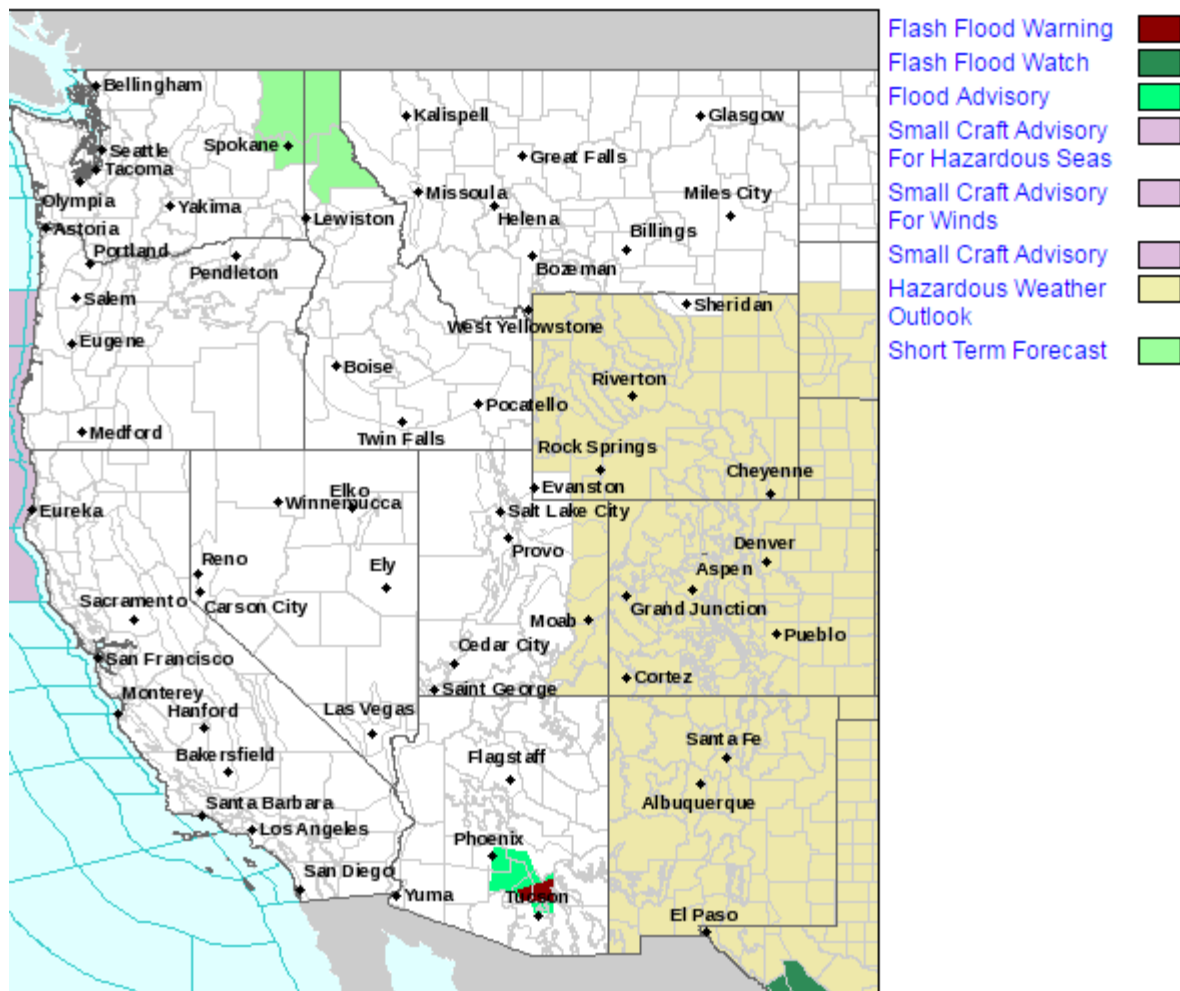

NORTHERN CALIFORNIA

A low pressure trough will continue moving east over the region. A little disturbance rotating through the trough overnight generated a variety of cloud types over the NE quarter of the area along with some apparent virga. As the trough begins to exit the region, there may still be a small chance of some afternoon and evening light showers or isolated mountain thunderstorms for our far eastern areas north of a Doyle-to-Quincy line. If this happens, it looks like the most favorable areas for North Ops will be around Mt. Lassen and perhaps the Warners, but most of any showers or thunderstorms that happen should be further east in Nevada. Thursday a high pressure ridge will move over the region and strengthen for a few days with a warming trend. Afternoon high temperatures will rise to around 5-8 degrees above seasonal normals for the inland areas. Saturday looks like the peak of the warmer days coming up when the hottest inland valleys should have highs around 105. Sunday another fairly weak Pacific trough is expected to begin moving into the region that will likely cool temperatures down a few degrees for a couple days. The marine layer will become thinner under the high pressure ridge, and any overnight low clouds and patchy fog that form will be more likely to dissipate around midday in most areas. The marine layer may become a bit deeper again Sunday and Monday under the trough, however, so any such cloudiness may persist longer those days. Overnight relative humidity (RH) recovery will generally be declining the rest of the week with nighttime thermal belt conditions likely returning to our mountain areas. Afternoon wind speeds will be very seasonable or fairly light with areas near and east of the Cascade-Sierra crest and in The Delta gusting to around 25-30 mph at the most each day. Otherwise rather light, locally terrain-driven typical on shore/up slope/up valley winds will prevail in the afternoon hours.

SOUTHERN CALIFORNIA

The upper level trough which has been parked over the area the last few days will be replaced by a ridge late this week, resulting in warmer and drier conditions. The trough axis is currently moving through the area which will result in relatively cool conditions today and Thursday before warmer weather arrives Friday. High temperatures the next two days will be in the 70s along the coast, upper 80s to lower 90s in the valleys to 105 in the deserts. Minimum RH will continue to be in the single digits in the Inyo National Forest and desert adjacent areas of the Angeles and San Bernardino National Forests. Local northwest winds of 10-20 mph will be possible along the central coast. Elsewhere, expect west winds of 10-20 mph with gusts to 30 mph in the Antelope Valley and Banning Pass and south winds of 15-25 mph through the Owens Valley during the afternoon hours. Expect less wind Thursday through the weekend. While the bulk of the moisture associated with the monsoon will remain well to our east, one or two storms will be possible along the Colorado River. Much warmer weather will return Friday, and by Saturday and Sunday, highs will be near 100 in the valleys. Minimum RH will drop into the 10-15% range over a wide area with less marine layer coverage expected over the weekend. However, clear skies and light winds should allow for better RH recovery each night the rest of the outlook period. Temperatures may cool a bit early next week, but highs will still remain a few degrees above normal through the duration of the outlook period. No further thunderstorm activity is expected.
